

PROBLEMS:

GOAL: Help humanity tackle another pandemic via distribution of medicine.

1. Supply shortages of preventative **medical implements** in stores.

When pandemics take off, people rush to stores and purchase in excess.

2. Deadlier outcomes of diseases due to **vitamin** and **mineral deficiencies**.

People's day-to-day health is suboptimal, leading to worse disease outcomes.

3. Inconsistent news and advice, hard to filter for the average person.

Leading to people not knowing what to use in order to prevent and alleviate.

4. Lack of reliable forewarning, leading to **panic** and **uncertainty**.

Tackling a pandemic requires long term planning. Joins all the other problems.

These problems lead to **inefficient distribution of medicine**. This *can* be solved.

SOLUTION: VIGIL+

Personalized, intelligent, online pandemic prediction, prevention and alleviation subscription service.

A. Pandemic prediction with health professionals and AI.

- Professional team of Epidemiologists, Data Scientists and Researchers.
- Analysis and prediction of diseases, strains and direction of spread using ML.
- The intelligence behind tackling medicine distribution and pandemics.

B. Reliable summaries, advice, recommendations and newsletter.

- Newsletter and personalized web application to publish relevant findings.
- Condenses, aggregates and summarizes worldwide pandemic information.
- Suggests what supplies, medications and supplements people need, for free.

C. Medical supply subscription box. Custom tailored, periodic deliveries.

- Supplements, masks, OTC medicine and other medical implements, at your doorstep.
- Tailored to your location, health situation and the intelligence gathered in solution A.
- Reliable stock, stored in advance for any product that may be sent out.
- Funds the rest of the services, so that solutions A and B may be free for all.
